

MONTHLY INDEX NEWS

Newsletter Updates

We regularly update this newsletter to include additional indices and consider layout modifications to the various sections.

Four new sections have been added this month:

- STOXX® ESG Broad Market indices
- STOXX® ESG Target indices
- STOXX® ESG Target TE indices
- STOXX® SRI (Socially Responsible Investing) indices

These are new families of indices that were launched in April 2021 to expand Qontigo's sustainability offering and meet investor demand across the spectrum. The DAX® ESG Target Index (featured in the DAX section) was also introduced as part of this objective.

STOXX Benchmark Indices

Key Points

Stocks rose for a third straight month in April, with the [STOXX® Global 1800 Index](#) breaking an all-time high, as investors became more convinced that a post-pandemic economic recovery will take hold.

The STOXX Global 1800 Index gained 4.5% when measured in dollars and including dividends, for its best monthly showing since November. The index added 2.1% in euros as the greenback weakened 2.4% against the common currency.

The pan-European [STOXX® Europe 600 Index](#) increased 2.3% in euros during the month and marked a record high when excluding dividends. The Eurozone's [EURO STOXX 50® Index](#) climbed 1.9% and remained at its highest level since January 2008 on a price basis. The [STOXX® North America 600 Index](#) jumped 5.3% in dollars, as did the [STOXX® USA 500 Index](#). The [STOXX® Asia/Pacific 600 Index](#) was the worst performer among major regional indices, rising only 0.4% in dollars.

DAX Indices

Key Points

Germany's DAX family is led by the blue-chip [DAX®](#). The [MDAX®](#) and [SDAX®](#), respectively, gauge the performance of the country's mid- and small-caps. The [TecDAX®](#) tracks German technology companies. Finally, the [HDAX®](#) groups all equities that belong to either the DAX, MDAX or TecDAX.

The [DAX® 50 ESG Index](#) excludes companies involved in controversial activities and integrates environmental, social and governance (ESG) scoring into stock selection. The [DAX® ESG Target Index](#) additionally implements, through a series of constraints, an optimization process to maximize the portfolio's overall ESG score, minimize the tracking error to the DAX and reduce the portfolio's carbon intensity by at least 30% relative to the DAX.

The DAX Selection Indices underwent [rules changes](#) in March, part of a larger methodology overhaul of the index suite.

ESG Broad Market Indices

Key Points

The STOXX ESG Broad Market Indices apply a set of compliance, product involvement and ESG performance exclusionary screens on a starting benchmark universe until only the 80% top ESG-rated constituents remain. Companies that are non-compliant based on the Sustainalytics Global Standards Screening assessment or are involved in controversial weapons are not eligible for selection. Additional filters exclude companies involved in tobacco production, thermal coal and military contracting.

The [EURO STOXX® ESG Broad Market Index](#) returned 23 basis points more than the benchmark [EURO STOXX® Index](#) during April.

ESG Target Indices

Key Points

The [STOXX ESG Target Indices](#) seek to significantly improve the benchmark portfolio's ESG profile, while mirroring its returns as closely as possible.

The STOXX ESG Target Indices follow a similar initial selection methodology as the STOXX ESG Broad Market Indices. From that selection pool they implement, through a series of constraints, an optimization process to maximize the overall ESG score of the portfolio while constraining the tracking error to the benchmark.

Risk and Return Characteristics

	Return (%)						Annualized volatility (%)

ESG Target TE Indices

Key Points

The [STOXX ESG TE Indices](#) follow a similar methodology to the ESG Target Indices, but the optimization imposes a tracking error minimization, subject to a constraint of improving the ESG Z-score of the resulting portfolio.

SRI Indices

Key Points

The [STOXX SRI indices](#) apply a stricter set of involvement, carbon emission intensity and compliance screens, and additionally track the best ESG performers in each industry group within a selection of STOXX benchmarks.

In the month that ended, the SRI indices produced returns that were not, broadly speaking, very dissimilar to those of benchmarks. The [EURO STOXX® SRI Index](#), however, returned 29 basis points more than the EURO STOXX Index.

Risk and Return Characteristics

ESG-X Indices

Key Points

The [STOXX ESG-X indices](#) performed broadly in line with their respective benchmarks during April.

The ESG-X indices are versions of traditional, market-capitalization-weighted benchmarks that observe [standard responsible exclusions](#) of leading asset owners. They incorporate basic norm- and product-based exclusion criteria to comply with ESG principles. Companies are excluded based on data provider Sustainalytics' determination of non-compliance with their Global Standards Screening assessment, involvement in controversial weapons, tobacco production, thermal coal extraction or exploration, or use of thermal coal to generate at least a quarter of power output.

ESG and Sustainability Indices

Key Points

Similarly, STOXX's ESG and Sustainability indices tracked their benchmarks closely in April.

The [STOXX® USA ESG Impact Index](#), however, underperformed the [STOXX® USA 900 Index](#) by 34 basis points. The STOXX ESG Impact Indices offer a broad market exposure that is tilted towards companies that score better with respect to a small set of environmental, social, and governance key performance indicators.

The [EURO STOXX 50® ESG Index](#) beat its benchmark by 12 basis points. The index is derived from the flagship EURO STOXX 50 and implements a set of standardized ESG exclusion screens, while additionally replacing the 10% of companies with the lowest ESG scores by stocks with a higher ESG score from the same ICB Supersector.

Climate Indices – Paris-Aligned Benchmark Indices

Key Points

There were very strong performances from the [STOXX Paris-Aligned Benchmark Indices \(PABs\)](#) last month, in particular from those covering the European market.

The indices are based on liquid securities from a selection of STOXX Benchmark Indices and follow the [EU Paris-aligned Benchmark \(EU PAB\) requirements](#) outlined by the European Commission's Technical Expert Group (TEG) on climate benchmarks.

Those requirements are designed such that the resulting PAB portfolio's greenhouse gas (GHG) emissions are aligned with the long-term global warming target of the Paris Climate Agreement. The indices incorporate stringent carbon limitations in the selection of holdings, in line with global commitments to work towards keeping global warming between 1.5°C and 2°C above pre-industrial levels.

We have partnered with Sustainalytics for datasets relating to their Global Standards Screening and controversial weapons, and with ISS ESG for climate-related data such as Scope 1 to Scope 3 emissions, science-based climate targets, and others.

Climate Indices – Climate Transition Benchmark Indices

Key Points

The [STOXX Climate Transition Benchmark Indices \(CTBs\)](#) also did better than benchmarks in the month that ended.

The STOXX CTBs are based on liquid securities from a selection of STOXX Benchmark Indices and follow the [EU Climate Transition Benchmark \(EU CTB\) requirements](#) outlined by the TEG on climate benchmarks. Those requirements are designed such that the resulting CTB portfolio is on a decarbonization trajectory.

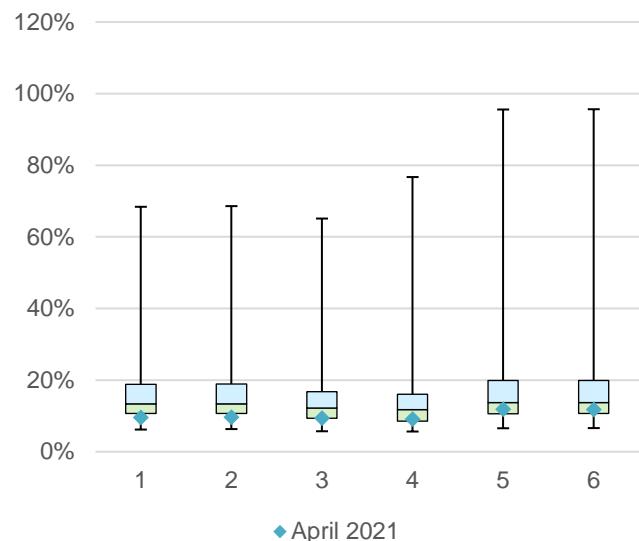

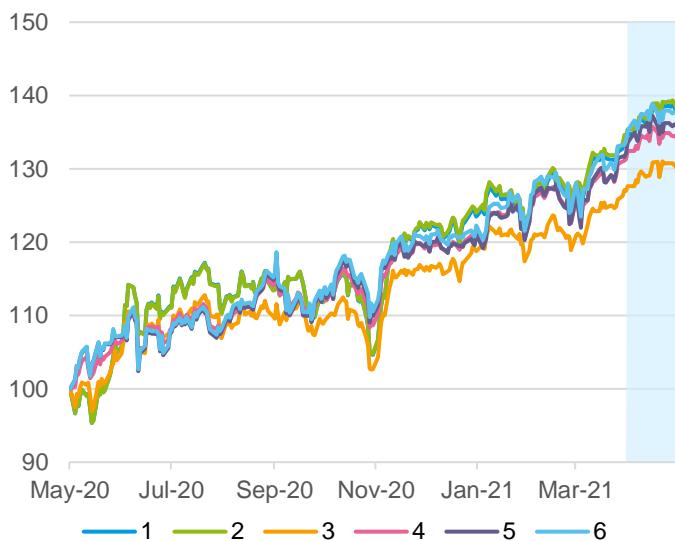

As with the Paris-Aligned Benchmarks, we have partnered with Sustainalytics for exclusions datasets, and with ISS ESG for climate-related data, science-based climate targets and others.

Index and Volatility Performance

Climate Indices – Impact, Change Leaders and Awareness Indices

Key Points

The performance from STOXX's Climate indices was, on the other hand, more mixed.

The indices include companies that are leading in terms of climate change as well as those that are managing the effect of climate-related issues. They additionally exclude companies in contravention of global norms, and those involved with coal, tobacco or controversial weapons.

The [STOXX® Global Climate Change Leaders Index](#), which selects corporate leaders that are publicly committed to reducing their carbon footprint, topped the STOXX Global 1800 Index by 16 basis points.

We have partnered with CDP, a leading climate data provider, to track companies taking action on, managing and understanding the effects of climate change.

Low Carbon Indices

Key Points

Among the [STOXX Low Carbon Indices](#), the [EURO STOXX 50® Low Carbon Index](#) topped its benchmark by 56 basis points in the month that ended.

The STOXX Low Carbon Indices were designed to help reduce the carbon footprint of portfolios and limit their exposure to climate-related risks. They use data from CDP and ISS ESG.

Thematic Indices – Revenue-Based

Key Points

The STOXX® Thematic Indices seek exposure to the economic upside of disruptive global megatrends and follow two approaches: revenue-based and artificial-intelligence-driven. Only eight of 22 revenue-based thematic indices outperformed the STOXX Global 1800 Index during April.

At the top of the ranking came the [STOXX® Global Fintech Index](#), with a 7.1% advance in dollars. At the bottom, the [STOXX® Global Electric Vehicles & Driving Technology Index](#) retreated 0.6%.

The average 2020 gain for all 22 indices was 35%, more than double that of the benchmark STOXX Global 1800 Index.

Thematic Indices – AI-Driven

Key Points

Among the three STOXX artificial-intelligence-driven thematic indices, the [iSTOXX® Yewno Developed Markets Blockchain Index](#) beat the benchmark STOXX Global 1800 for a third consecutive month.

The AI-driven thematic indices employ computational systems to select businesses investing in the adoption of intellectual property underpinning the respective theme. Two of them track companies exposed to the AI theme and one selects businesses investing in blockchain.

Factor Indices – Global

Key Points

This year's trend in factor investing reverted in April, with Momentum regaining a lead while investors slowed down their relative purchases of Value stocks, according to the [STOXX Factor Indices](#) tracking global portfolios. The [STOXX® Global 1800 Ax Value Index](#) has so far this year returned more than any of the other five factor indices in its family.

The [STOXX® Global 1800 Ax Momentum Index](#) advanced 5.6% in April, the family's best performance, but remains last in terms of 2021 returns.

The STOXX Factor Indices offer robust factor definitions and targeted factor exposures, and ensure the tradability of component stocks. They employ the institutionally tested analytics of Axioma Factor Risk Models.

ESG-X Factor Indices – Global

Key Points

The [STOXX® ESG-X Factor Indices](#) implement the same factor-based methodology of the STOXX Factor Indices, seeking exposure to five style signals, but do so on slightly smaller universes that exclude stocks based on the responsible policies of leading asset owners.

Four of the six indices did better than the benchmark STOXX Global 1800 ESG-X Index's 4.6% gain in dollars in April. Within this suite, Momentum was the standout performer.

Europe Factor Market Neutral Indices

Key Points

The Quality style also came out on top of the [iSTOXX® Europe Factor Market Neutral Indices](#), which assume a short position in STOXX Europe 600 futures to help investors neutralize systematic risk.

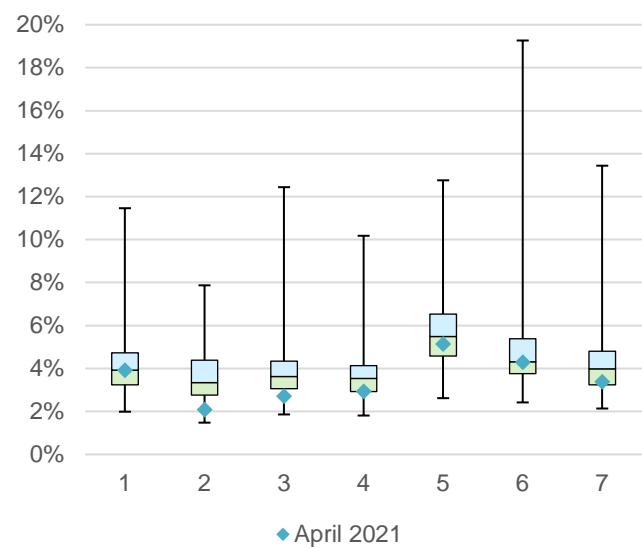

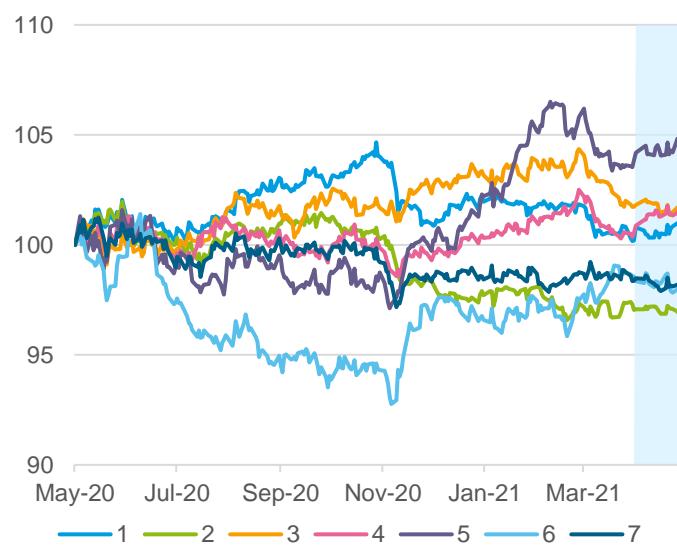

The indices are designed to offer exposure to pure factor investing, in isolation of the market risk.

Index and Volatility Performance

Premia Indices

Key Points

Likewise, Quality also ruled last month among the [EURO STOXX® Multi Premia® and Single Premium Indices](#). The benchmark EURO STOXX Index rose 2.3%.

The EURO STOXX Multi Premia and Single Premium Indices track seven distinctive sources of equity risk and returns on a broad and liquid universe of about 300 Eurozone stocks. They integrate the academic-research-based Multi Premia methodology developed by STOXX's partner Finreon.

Minimum Variance Indices

Key Points

There was a mixed picture for [minimum variance strategies](#) last month. In Europe, the **STOXX® Minimum Variance Indices** gained relative pace in April after underperforming benchmarks in earlier months. The inverse was true of the indices covering the US market.

The STOXX Minimum Variance Indices come in two versions. A constrained version has similar exposure to its market-capitalization-weighted benchmark but with lower risk. The unconstrained version, on the other hand, has more freedom to fulfill its [minimum variance mandate](#) within the same universe of stocks.

Dividend Indices

Key Points

The [dividend strategies](#) tracked by STOXX slowed down relative to benchmarks in April, following strong returns in the first quarter.

The [STOXX® Global Select 100 EUR Index](#), which had in March its best month since 2009, dropped 1.7% in euros during April. The index blends increasing dividend yields with low volatility.

The [STOXX® Global Maximum Dividend 40 Index](#) selects only the highest-dividend-yielding stocks. The [STOXX® Global Select Dividend 100 Index](#), meanwhile, tracks companies with sizeable dividends but also applies a quality filter such as a history of stable payments.

Finally, the [STOXX® Global ESG-X Select Dividend 100 Index](#) belongs to the STOXX ESG-X Select Dividend family. The suite [was introduced in February](#) and targets the highest-yielding stocks within universes screened for responsible investment criteria.

Dividend strategies were overall very weak performers in 2020 and had recently reversed their trend.

Volatility Indices

Key Points

European equity volatility ticked slightly higher during April, as measured by the [EURO STOXX 50® Volatility \(VSTOXX\) Index](#), [VDAX-New® Index](#) and [EURO STOXX 50® Volatility of Volatility Index \(V-VSTOXX\)](#).

The VSTOXX and VDAX measure the implied volatility of EURO STOXX 50 Index and DAX Index options, respectively, across their entire expiration curve. The V-VSTOXX measures the implied volatility of options on VSTOXX futures, hence reflecting expectations regarding the volatility of volatility. All three are significantly lower than their March 2020 peaks.

The three measures showed a relatively high negative correlation to the underlying stock market in April.

Volatility Strategy Indices

Key Points

The [VSTOXX® Short-Term Futures](#) and [VSTOXX® Mid-Term Futures](#) indices, which track the return from a rolling long position in VSTOXX futures contracts on Eurex, posted positive returns in the month that ended.

The [EURO STOXX 50® Investable Volatility Index](#), which measures forward implied volatility in the Eurozone equity market, retreated. So did the [Dynamic VSTOXX® Index](#), which combines the VSTOXX Short-Term Futures Index and the VSTOXX Mid-Term Futures Index to exploit the superior performance of short-term futures when the volatility forward curve is in backwardation and of mid-term futures when the volatility forward curve is in contango.

Lastly, the [EURO STOXX 50® Volatility-Balanced Index](#) continued its march higher and is now up 11.1% this year. The index combines investments in the EURO STOXX 50 and in the VSTOXX Short-Term Futures Index.
